Zhang, Yifan
TITLE OF INVENTION: HEPATITIS E VIRUS ANTIGENS AND USES THEREFOR NUMBER OF SEQUENCES: 31
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              INFORMATION FOR SEQ ID NO: 14:
    SEQUENCE CHARACTERISTICS:
    LENGTH: 660 amino acids
    TYPE: amino acid
    STRANDEDNESS: Hepatitis E Virus (Mexico Strain)
    ORF-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       #1.25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Version

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ð
                                                                                                                           Immunogenic hepatitis E virus (HEV) peptides are selected from the ORF1, ORF2 and ORF3 regions of HEV. The peptides can be used in vaccines to prevent infection by HEV. The antibodies can neutralise and block HEV infection and can be used to prevent or treat HEV infection. The peptides and antibodies can also be used as diagnostic reagents. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 24-OCT-2003 to standardise OS field)

The method comprises: (a) reacting a serum sample with a her peptide antipen; and (b) examining the peptide for the presence of bound Ab, where the presence of bound Ab indicates the presence of HEV Ab. The present sequence represents the protein from the open reading frame, ORF2, from HEV Mexico strain. The method can be used to diagnose infection with the enterically transmitted non-Ahon-B viral hepatitis agent HEV, specifically the HEV Burma and Mexico strains. (Updated on 25-MAR-2003 to correct PF field.) (Updated on 17-OCT-2003 to standardise OS

The sequence is that of the putative virus capsid protein encoded by Mexico strain hepatitis E virus (HEV) open reading frame ORF2. This protein or peptide fragments of it may be used in a vaccine composition for immunising an individual against HEV. Antibodies raised against these peptides can also be used in such vaccines. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

diagnosis, prevention and treatment of hepatitis B virus infection mammals, particularly humans. 

Example 1; Fig 3A; 70pp; English

This invention describes a swine hepatitis E virus (HEV) and its natural mutants which are capable of cross-reacting with antibodies reactive with a human HEV strain or natural mutants. The HEV and the proteins can be used in vaccines for immunising against HEV infection. The swine HEV can be used in humans to prevent possible infection by human HEV. The swine Strains of HEV. The swine HEV can also be used as a therapeutic treatment for infection by other attrains of HEV. The swine HEV can also be used in therapy, detection and diagnosis. The products can also be used for determining the susceptibility of cells or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The putative capsid protein (AAR96090) of hepatitis E virus (HEV) Mexico strain is encoded by ORF-2 (AAT27108) of the virus. PCR amplification of ORF-2 allows produ. of capsid protein or of C-terminal regions of the capsid protein (see also AAR96092, AAR96094 and AAR96096) and expression in Spodoptera frugiperda Sf9 insect cells using a baculovirus vector provides recombinant C-terminal regions (see also AAR96102 and AAR96104) useful as diagnostic reagents and in vaccines. The HEV Burma strain capsid protein (AAR96089) may similarly be used. (Updated on 16-OCT-2003 to standardise OS field)

62K antigen (AAR96092) comprises the C-terminal 549 amino acids of hepatitis B vinus (HEV) Mexico strain capsid protein (see also AAR96090). It is obtd. by PCR amplification of HEV Mexico ORF-2 (AAT27108), insertion of amplified DNA (AAT27110) into vector pGBX and expression in E. coli cealls. Expression of full-length ORF-2 in Sf9 insect cells using a haculovirus system also results in prodn. of 62K antigen (see also AAR96102 and AAR96104). 62K represents an improved antigen, in comparison to bacterial expressed proteins, for use in HEV diagnostic assays, and also has excellent immunogenic properties. DNA (AAT27110) coding for the 62K antigen (AAR96092) of hepatitis E virus (HEV) Mexico strain capsid protein was cloned into baculovirus expression vector pBluBacIII and recombinant 62K was expressed in Sf9 insect cells. High levels of expression were obtd. and the recombinant 62K was obtd. in over 95% purity. However, C-terminal processing resulted in the deletion of 9 or 23 amino acids from 62K, giving 2 related polypeptide species (AAR96102 and AAR96101 and AAR96103). Recombinant 62K amitigen (see also AAR96101 and AAR96103). Recombinant 62K represents an improved antigen, in comparison to bacterial expressed proteins, for use in HEV diagnostic assays, and also has excellent immunogenic properties. (Updated on 16-OCT-2003 to standardise OS field)
